Expert Cloud Architect

Pacific Gas & Electric (PG&E) Hybrid Cloud Platform Team

LOCATION	DURATION	PARTNER AGENCY
Oakland, CA	**12 Months (Extensible)**	**Spectraforce**

Department Overview

Information Technology delivers secure, resilient, and scalable enterprise platforms that support critical business applications, infrastructure services, cloud operations, automation, and emerging technology enablement.

Position Summary

The Expert Cloud Architect is a senior hands-on technical leader within the Hybrid Cloud Platform team who operates at the intersection of enterprise architecture strategy and deep infrastructure delivery. Reporting to the Sr. Cloud Principal Architect, this role owns the most complex architectural challenges, hybrid cloud connectivity, platform-wide automation frameworks, landing zone evolution, and cross-domain integration patterns, while remaining deeply embedded in code and delivery.

This role carries broader scope and higher autonomy than the Senior Cloud Architect. The Expert Cloud Architect sets technical direction for multi-team initiatives, defines enterprise-grade Terraform module standards, architects end-to-end platform capabilities, and drives adoption of emerging technologies (AI-assisted operations, autonomous infrastructure, advanced observability). They are expected to influence architecture decisions beyond their immediate team, partnering with enterprise architects, security leadership, and business stakeholders.

The Expert Cloud Architect spends hands-on time writing Terraform, designing pipeline architectures, building proof-of-concepts, and directly resolving the hardest technical problems the team encounters. They are the person who unblocks the Senior Cloud Architects when those architects are stuck.

The role spans AWS, Microsoft Azure, and private cloud platforms (Azure Local), with accountability for platform-wide design consistency, performance, security posture, and operational excellence across the hybrid estate.

Key Responsibilities & Scope

- **Hybrid Architecture & Connectivity:** Architect enterprise-grade hybrid connectivity and multi-cloud landing zones across AWS, Azure, and Azure Local private cloud environments.
- **Hands-On Engineering & Standards:** Write production-grade Terraform, establish platform module standards, and build robust pipeline automation frameworks.
- **Technical Leadership & Unblocking:** Serve as the tier-one technical escalation point for complex architectural blockers across the hybrid cloud estate.
- **Emerging Tech & AI Operations:** Drive the integration of advanced observability, autonomous infrastructure patterns, and AI-assisted cloud operations.

Recruitment & Communication Thread

Pranjali Tiwari (Spectraforce) — Today, 8:38 AM
Confirmed end client is **PG&E**. Contract runs under Spectraforce payroll with extension potential (no FTE conversion guarantee).

Mahamat Hissein GUIAGOUSSOU — Today, 2:06 PM
Expressed strong enthusiasm (PG&E is a long-standing local provider) and initiated secure transition to corporate email channel (`pranjali.tiwari@spectraforce.com`).

Pranjali Tiwari (Spectraforce) — Today, 4:21 PM
Requested updated resume submission via email channel to progress candidacy.
