Subject: Application for Principal Cloud & Infrastructure Architect (Consultant / Short-Term)

Dear PGandE Hiring Team,

Drawing from my comprehensive background as a Master Principal Cloud Architect and Lead Resident Architect at Oracle—alongside foundational systems engineering experience—I was immediately drawn to the **Principal Cloud & Infrastructure Architect (Consultant / Short-Term)** opportunity at **PGandE**.

In an era where infrastructure resilience, robust security posture, and rapid automation are paramount, my career has centered on bridging complex technical challenges with secure, high-performance execution. Whether designing zero-trust cloud architectures, securing mission-critical Kubernetes (OKE) environments, or building repeatable Infrastructure as Code (IaC) pipelines with Terraform, OpenTofu, and Ansible, I specialize in delivering scalable and secure enterprise solutions.

I am eager to bring my deep expertise in cloud security, infrastructure automation, and executive technical leadership to **PGandE** to help safeguard and accelerate your critical technology initiatives from day one.

Sincerely,

Mahamat Hissein Guiagoussou
