Mahamat Hissein GUIAGOUSSOU

Master Principal Cloud Architect & Solutions Engineering Leader | Senior Customer Engineer & DevRel | Bridging Infrastructure Automation, AIOps/MLOps, & Enterprise AI Workloads

San Francisco Bay Area

Summary

Master Principal Cloud Architect and Solutions Engineering Leader with over 13 years at Oracle and more than five years serving as an OCI Master Principal Cloud Architect, specializing in cloud transformation, multi-cloud migration, automation, and Infrastructure as Code (IaC).In my strategic onboarding role, I orchestrate the end-to-end journey from initial discovery and governance through source-to-target architecture, landing-zone readiness, migration planning, wave validation, pilot execution, production cutover, and operational handover. I work across customers, system integrators, partners, and internal Oracle teams to align technical strategy, delivery execution, dependencies, and operational readiness. My work also bridges core cloud infrastructure automation directly with modern AI platforms, accelerated compute frameworks, and AIOps/MLOps pipelines. I help enterprises accelerate their adoption of Oracle Cloud Infrastructure through practical transformation strategies, scalable architectures, and automation-driven solutions.I personally bring deep expertise in Terraform and IaC, using automation and architectural judgment to determine the right implementation approach for each workload. This includes designing OKE-native solutions, leveraging OCI Container Instances where appropriate, and developing scalable patterns that accelerate migration while balancing operational simplicity, performance, best practices, and long-term maintainability.Whether leading multi-million dollar overall opportunities and proof-of-concepts (PoCs), orchestrating end-to-end cloud migrations, or driving technical enablement and developer relations as a trusted advisor, my mission is to align technical excellence with tangible business value.

Experience

Oracle

13 years 5 months

Master Principal Architect, Cloud Migration & AI/MLOps Solutions Practice Lead

June 2026 - Present (4 months)

San Francisco Bay Area

Driving strategic cloud transformations, multi-cloud expansions, and high-performance technical enablement across enterprise accounts:

Enterprise AI & MLOps Leadership: Lead strategic enterprise customer engagements and overall business opportunities, bridging core cloud infrastructure automation with modern AI platforms, accelerated compute frameworks, and AIOps/MLOps pipelines.

End-to-End Migration Lifecycle: Orchestrate end-to-end customer onboarding lifecycles spanning initial discovery, governance, source-to-target architecture design, landing-zone readiness, migration planning, wave validation, pilot execution, production cutover, and operational handover.

AI-Assisted Architecture & Validation: Integrate AI as a core component of delivery methodology to continuously validate and optimize architectures, IaC and application code, technical deliverables, and overall implementation quality while acting as the final technical decision-maker.

Infrastructure as Code & Kubernetes: Leverage deep Infrastructure as Code (IaC) and Terraform mastery to engineer scalable containerized architecture patterns, balancing native Kubernetes (OKE) implementations with automated operational toolchains for high-throughput AI workloads.

Technical Advocacy & Developer Relations: Publish multi-part technical blog series and hands-on live labs for Oracle Kubernetes Engine (OKE) to empower and enable OCI developers, architects, and implementers with best practices in cloud automation and infrastructure deployment.

Ecosystem Evangelism: Drive customer success and global evangelism as an OCI Ambassador, sharing cloud best practices, creating technical content and tutorials, collaborating with global teams, and fostering an effective OCI community.

Multi-Cloud Solutions Automation Practice Lead

March 2023 - Present (3 years 7 months)
Pleasanton, CA

Driving enterprise cloud evolution, automation standards, and strategic multi-cloud integrations across major accounts:

Spearheaded the development of advanced cloud solutions that transformed service onboarding and accelerated digital execution for Oracle's top tier clients.

Designed and implemented robust automation processes across complex multi-cloud environments, integrating AWS, Azure, GCP, and OCI architectures.

Achieved a 35% increase in deployment efficiency and a 25% reduction in time-to-market through strategic automation roadmaps and streamlined operational processes.

Collaborated closely with engineering and external partner teams to enhance product innovation, ensure robust governance, and align technical roadmaps with enterprise demands.

Oracle Cloud Authorized Instructor & Technical Evangelist
March 2022 - Present (4 years 7 months)
Pleasanton, CA

Driving developer advocacy, customer/partner ecosystem enablement, and technical evangelism through hands-on cloud education, workshops, and cross-CSP competitive differentiation:

Led comprehensive technical enablement and developer advocacy programs for strategic partners, systems integrators, and enterprise developers, accelerating ecosystem adoption of OCI architecture and native services.

Delivered high-impact developer bootcamps, workshops, and technical training sessions, empowering customer engineering teams to successfully build, scale, and optimize workloads on Oracle Cloud Infrastructure.

Conducted hands-on technical comparisons and architectural feature evaluations contrasting OCI capabilities against alternative CSP services (such as AWS EC2, Azure, or GCP), demonstrating OCI performance, cost, and infrastructure advantages.

Evangelized advanced cloud engineering, automation, and AI infrastructure patterns through community engagement, developer-focused tutorials, and direct collaboration with strategic enterprise accounts.

Master Principal Cloud Architect
November 2020 - Present (5 years 11 months)
San Francisco Bay Area

Shaping enterprise cloud adoption strategies, scalable architectures, and advanced cloud-native migrations for strategic global accounts:

Architected and delivered large-scale enterprise cloud transformations, guiding major customers through complex migration roadmaps, cloud readiness assessments, and high-availability workload designs.

Established standardized Infrastructure as Code (IaC) frameworks and automation patterns, driving consistency, security, and velocity across multi-tier cloud deployments.

Partnered with executive stakeholders, product development, and technical delivery teams to align cloud architectures with long-term business goals, scalability requirements, and governance standards.

Delivered high-impact technical enablement, workshops, and advisory sessions for internal engineering teams and key enterprise accounts to accelerate cloud proficiency and adoption best practices.

Systems Architect & Senior Cloud Architect | IaC/Cloud Automation Practice Lead
December 2016 - Present (9 years 10 months)
Santa Clara, CA

Driving resilient cloud infrastructure design, systems optimization, and automated delivery frameworks:

Engineered robust, highly available multi-tier cloud network topologies and virtual cloud network (VCN) architectures to support secure, high-throughput enterprise workloads.

Optimized system reliability and automated provisioning workflows by deploying standardized Infrastructure as Code (IaC) modules and continuous integration patterns.

Partnered directly with cross-functional engineering teams to troubleshoot complex architectural bottlenecks, streamline deployment velocity, and enforce enterprise-grade security compliance.

OCI Ambassador & Technical Community Lead
December 2025 - July 2026 (8 months)
San Francisco, Bay Area

Championing ecosystem growth and expanding global awareness through targeted digital advocacy and community engagement:

Consistently produce and share technical content including in-depth articles, tutorials, and success stories across digital channels to significantly enhance OCI's visibility and market impact.

Organize and host community meetups, creating collaborative spaces for developers, enthusiasts, and architects to connect, learn, and share their passion for Oracle Cloud Infrastructure.

Collaborate directly with global product and evangelism teams to align community-driven content with emerging feature releases, ensuring developers have actionable insights into modern cloud tooling.

Bridge enterprise infrastructure requirements with grassroots developer adoption, fostering a thriving ecosystem around automated cloud deployments and scalable architectures.

OCI Infrastructure as Code/Terraform Meetup Chair
December 2023 - July 2024 (8 months)
San Francisco Bay Area

Leading developer community-driven technical leadership, knowledge sharing, and hands-on enablement around Infrastructure as Code and automation ecosystems:

Co-chaired and spearheaded regional and virtual meetup series, establishing a collaborative forum for cloud engineers, developers, and architects to master Infrastructure as Code (IaC).

Curated technical sessions and live demonstrations focusing on advanced Terraform, OpenTofu, and OCI Resource Manager automation patterns to accelerate deployment velocity.

Fostered a vibrant practitioner community, bridging enterprise implementation strategies with grassroots developer workflows to drive widespread adoption of modern cloud infrastructure automation.

Principal Cloud Architect & Systems Architect
June 2018 - November 2020 (2 years 6 months)
San Francisco Bay Area

Here is the next role in your career trajectory, capturing your foundational tenure as a Principal Cloud Architect / Senior Systems Architect:

Engineering high-availability enterprise infrastructure and leading complex systems design across mission-critical customer environments:

Architected and delivered large-scale enterprise cloud transformations, guiding major customers through intricate migration roadmaps, cloud readiness assessments, and robust workload designs.

Established standardized Infrastructure as Code (IaC) frameworks and multi-tier cloud network topologies (including Virtual Cloud Networks) to drive consistency, security, and scalability.

Partnered cross-functionally with product development and technical delivery teams to troubleshoot architectural bottlenecks, align technical roadmaps with enterprise demands, and enforce strict security compliance.

Cloud Architect & Lead IoT Specialist
July 2015 - January 2017 (1 year 7 months)
Santa Clara, CA

Driving strategic IoT cloud architecture, ecosystem business development, and cross-platform provisioning automation:

Engineered secure, scalable multi-cloud architectures and IoT ecosystems for major enterprise clients across manufacturing, healthcare, transportation, and communication sectors.

Spearheaded technical migration frameworks and Proofs of Concept (PoCs), transitioning partner stacks from competing hyperscalers (AWS, Azure) and legacy on-premises environments to OCI. '# Advanced infrastructure automation by leading the migration to PowerShell CLI frameworks

and developing a'utomated provisioning pipelines for complex multi-tier components (Compute, Networking, VCNs, Load Balancers, and Databases).

Principal Sales Customer Engineer & Technical Staff
May 2013 - June 2015 (2 years 2 months)
Santa Clara, CA

Partnering with executive leadership and cross-functional teams to drive strategic architecture design, customer migrations, and large-scale platform deployments:

Partnered with senior executives to define strategic vision and technical goals for the Oracle Communication Digital Store (Oracle CDS), collaborating closely with internal engineering, QA, and support teams alongside external consulting partners.

Led comprehensive RFI/RFP responses, built technical prototypes, and executed high-impact proofs-of-concept (PoCs) to translate business strategy into scalable, production-ready architectures.

Directed new customer deployments and migration initiatives to accommodate unexpected enterprise growth, ensuring zero-downtime transitions and robust platform scalability.

Delivered multi-device and multi-portal training sessions and live demonstrations at major global trade shows (such as Oracle OpenWorld), highlighting exceptional technical communication and ecosystem enablement.

Experience Unlimited
Director, Information Technology (IT)
October 2012 - May 2013 (8 months)
Concord, CA

Directing executive IT operations, mission resource management, and strategic board governance for regional initiatives:

Served on the Board of Directors (BoD), actively contributing to high-level strategic decision-making, organizational planning, and regulatory compliance reporting.

Led and managed comprehensive IT infrastructure and data resources, overseeing secure data management, media handling, digital communications, and event support.

Supervised resource recruitment, team leadership, and advanced data security initiatives, successfully aligning departmental operations with overarching board-level objectives.

Oracle

Principal Member of Technical Staff - Oracle Communication Digital Store

February 2010 - October 2012 (2 years 9 months)

Santa Clara, CA

Architecting foundational digital commerce platforms and aligning cross-functional engineering teams for large-scale enterprise rollouts:

Partnered with executive leadership to define the strategic architecture and product roadmap for the Oracle Communication Digital Store (OCDS), bridging business objectives with core system design.

Collaborated closely with internal engineering, QA, and external system integrators to build scalable prototypes and drive high-impact proofs-of-concept (PoCs) from concept to deployment.

Led foundational deployments and platform migrations for key telecommunications customers, ensuring high availability and seamless accommodation of rapid enterprise growth.

Spearheaded technical training and live multi-device demonstrations at premier global trade shows (such as Oracle OpenWorld), showcasing platform capabilities to international audiences.

Sun Microsystems

7 years 7 months

Technical Account Manager – Tier 1 Telecom Apps Store Ecosystem

July 2009 - December 2010 (1 year 6 months)

Santa Clara, CA

Managing global technical evaluations, pre-production deployments, and international project delivery for core enterprise Java platforms:

Led the technical evaluation, testing, and deployment of the Java System Content Delivery Server (SJ-CDS) across client pre-production environments.

Guided major enterprise content providers through complex deployment stages, including pre-provisioning, pre-loading, production readiness assessments, and compliance documentation.

Directed the end-to-end global delivery of SJ-CDS across the US, Europe, and Africa, overseeing international scheduling, resource allocation, and cross-border risk mitigation.

Customer and Field Engineer Lead - Java Mobile Content Deliver Platform

June 2003 - June 2009 (6 years 1 month)

Santa Clara, California, United States

I successfully led the integration of the Sun Java System Content Delivery Server, enhancing customer experiences and operational efficiency.

Engaged with global executives to refine sales and technical support strategies, fostering stronger customer relationships.

Oversaw geo-redundant deployments, ensuring seamless service availability across diverse geographical locations.

Developed Statements of Work and contributed to RFPs, leveraging technical expertise for strategic solution delivery.

Education

École de technologie supérieure

Phd Candidate, Innovative Technologique - Java based Mobile Agent for Handoff between Heterogeneous Networks

University of Yaounde, Cameroon

Master Degree in Computer Science, Paealel Computing

University Of Yaounde, Cameroon

Bachelor Degree, Mathematic, Statistics and Computer Science

Université du Tchad – Faculté des Science, N’Djamena (Tcahd)

DEUG - Diplôme d'Etude Universitaire Général, Mathematics, Physics and Chemistry
